Overview

If you look at FENIX through a microscope, you would see the structure that gives the surface its matte appearance. Cleaning matte surfaces means cleaning their structure.

EVERYDAY MAINTENANCE – Clean regularly with damp soft or microfiber cloth with warm water or combined with a mild detergent. You can use common household cleaning liquids, only abrasive cleaning liquids should be avoided.

ALWAYS rinse thoroughly to remove the detergent/cleaner with clean water; dry with soft cloth.

The Do's

- 1) Absorb spills
- 2) Clean with mild detergent, kitchen degreaser or limescale remover
- 3) Rinse thoroughly with water
- 4) Dry with a microfiber cloth

For stubborn stains, see list below. Also, a magic sponge can be used. Rinse with water and then dry with soft or microfiber cloth

ALWAYS rinse thoroughly to remove the detergent/cleaner with clean water; dry with soft/microfiber cloth.

The Don'ts

No abrasive cleaning liquids

No strongly acidic or alkaline products as they can stain the surface

No furniture polishs or wax-based cleaners

No abrasive scouring pads or steel wool

Tough Stains

Coffee/Sugar Syrups/Soft Drinks/Oil/Tomato Sauce/Fruit Juice/Wine/Sauces/Shoe Polish/Food Dye

- 1. Asborb spill

- 3. Rinse thoroughly with water and dry with clean microfiber cloth

Foundation/Lip Stick

- 1. Remove with make up remover
- 2. Use a kitchen degreaser and microfiber cloth
- 3. Rinse thoroughly with water and dry with clean microfiber cloth

Stamp Ink/Highlighters/Markers

- 1. Use a kitchen degreaser and microfiber cloth
- 2. Rinse thoroughly with water and dry with clean microfiber cloth

Eggs

- 1. Asborb spill
- 2. Use a kitchen degreaser and microfiber cloth
- 3. Rinse thoroughly with water and dry with clean microfiber cloth
- 4. Sanitize with disinfectant and microfiber cloth

Nail Polish

- 1. Remove with acetone
- 2. Use a kitchen degreaser and microfiber cloth
- 3. Rinse thoroughly with water and dry with clean microfiber cloth

Limescale Deposit

- 1. Use a limescale household remover and microfiber cloth
- 2. Rinse thoroughly with water and dry with clean microfiber cloth

Can bleach or hydrogen peroxide be used?

Bleach and heavily-chlorinated products should be avoided. If used, sodium hypochlorite should be concentrations lower than 5% for no longer than 5 minutes at a time, then rinse thoroughly with water and dry with clean soft/microfiber cloth.

Hydrogen peroxide at concentrations lower than 3% should be used and then rinse thoroughly with water and dry with clean soft/microfiber cloth. For concentrations higher than 3%, avoid leaving on surface more than 10 minutes at a time, then rinse thoroughly with with water and dry with clean soft/microfiber cloth.
